

CITY OF UNION POINT – FLUSHING WATER LINES

The City of Union Point will be flushing additional lines the week of **June 17th** for the public water system. Flushing will continue until completed depending on manpower.

We estimate the flushing throughout the city will take approximately 5 days. This is performed to ensure clean, safe drinking water, increase flows through fire hydrants, and identify any maintenance needs before they become a problem. During the process, City Maintenance Crews will be flushing fire hydrants and exercising water valves all throughout the city. **Please note that during this process there is the potential for sediment in the pipes to be stirred up causing discoloration of the water. The discoloration is not harmful or hazardous and is due to the natural mineral sediments in the pipelines.** If customers encounter discolored water in their homes, customers should turn on all the cold-water faucets (inside and outside) and allow them to run until the water is clear and flush all toilets multiple times. Your patience with this maintenance is appreciated.
